

AWS S3 Lab: Creating a Bucket & Loading Data

LAB OVERVIEW

Create an Amazon S3 bucket and organize it with folders and sample data files for use with AWS Glue.

STEP-BY-STEP PROCEDURES

STEP 1: Access Amazon S3

- In AWS Management Console, search for "S3"
- Click on S3 to go to the landing page

STEP 2: Create the S3 Bucket

- Click "Create bucket" button (right side of page)
- **Bucket Name:** `getting-started-with-glue-studio-[UNIQUE-STRING]`
 - Note: Each bucket name must be globally unique across all AWS accounts and regions
- Leave all other settings as default
- Scroll to bottom and click "Create bucket"

STEP 3: Create Root-Level Folders

- Click the bucket name to enter it
- Click "Create folder"
- Create one folder with this exact names:
 1. **datafiles**

STEP 4: Create Subfolders Inside datafiles

- Navigate into the **datafiles** folder
- Click "Create folder"
- Create two subfolders:
 1. **customers**
 2. **sales**
- Verify both folders exist before proceeding

STEP 5: Upload customers.csv

- Navigate into the **customers** folder
- Click "Upload"
- Add the **customers.csv** file using either:
 - Drag and drop into the upload area, OR
 - Click "Add files" and select the file
- Verify the file appears in "Files and folders" list
- Scroll down and Click "Upload"
- Wait for green "Upload succeeded" banner
- Click "Close"

STEP 6: Upload sales.csv

- Navigate to the **sales** folder
 - Click "Upload"
 - Add the **sales.csv** file using either:
 - Drag and drop into the upload area, OR
 - Click "Add files" and select the file
 - Verify the file appears in "Files and folders" list
 - Scroll down and Click "Upload"
 - Wait for green "Upload succeeded" banner
 - Click "Close"
-

FINAL BUCKET STRUCTURE

getting-started-with-glue-studio-[UNIQUE-STRING]/

```
|— datafiles/
|   |— customers/
|   |   |— customers.csv
|   |— sales/
|   |   |— sales.csv
```

KEY DELIVERABLES

- ✓ S3 bucket created with unique name
- ✓ One root folders created: datafiles
- ✓ Two subfolders created inside datafiles: customers, sales
- ✓ customers.csv uploaded to customers folder
- ✓ sales.csv uploaded to sales folder
- ✓ All files show "Upload succeeded" confirmation

IMPORTANT NOTES

- S3 bucket names must be unique globally across all AWS accounts and regions
- Proper folder organization is essential for AWS Glue ETL operations
- Data in S3 is currently raw and unoptimized
